

What we do, how we do it

Our focus is your product

Superior Engineering Solutions

Critical Technologies Inc. (CTI) is building tomorrow's products today, addressing challenges through product development. We utilize technology to deliver solutions and create new opportunities.

At CTI, we understand the technical challenges faced by government and commercial customers. We see technology both as an enabler and as a generator of new opportunities. We are positioned to help our clients act on the endless opportunities enabled by new technologies.

Critical Technologies provides cost effective solutions, maximizing opportunity and resources.

Our highly motivated and experienced *people*, through our continuously improving operating *processes*, applying the latest in *technology*, uniquely position CTI to be your development partner of choice.

With a history of product development and innovation, our staff maintains skill in:

- Software development
- Digital, analog and RF Circuit design
- System design, integration and test

And we will continue with on-going R&D investments in technology and application areas such as:

- Sensor signal processing
- Wireless networking
- Fault tolerant storage networking

Background

Critical Technologies harnesses the entrepreneurial spirit of talented engineering professionals. The backgrounds of our technical team include advanced education, publications, patents and participation in the local and National engineering communities. Staff members average over 15 years of engineering experience in military and commercial environments.

CTI's current laboratory and office space are extensive and have vast expansion capacity. Development equipment and workstations are the primary tools of our staff and are frequently upgraded to support new initiatives.

With an array of professional experience, CTI will deliver superior solutions.
